

RINSE AID™

WENCO® RINSE AID™ is formulated to be used in medium hard water areas to control scale build up and hard water spots. RINSE AID™ also controls the alkalinity in the final rinse cycle by neutralizing alkaline soap carry over.

RINSE AID™ is a concentrated drying agent that provides excellent sheeting action which eliminates the need for towel drying and produces spotless work.

DIRECTIONS FOR USE WEAR GLOVES & EYE PROTECTION

Depending on water conditions the injection system should be set to deliver 50-300 PPM rinse aid or approximately 1/3oz. per 10 gallons in the rinse cycle. This concentration level must be maintained with an injection system. Adjust the injector to achieve rapid sheeting.

If temperature in the dishwasher is allowed to drop below 120°F, excessive sudsing may result. For best results RINSE AID™ should be used at 140°F.

ITEM# FCRA

RINSE AID™

TECHNICAL PROPERTIES

Form.....	Liquid
Color.....	Blue
pH Concentrate.....	2.2
pH 1% Solution.....	2.8
Specific Gravity @75°F.....	1.0
Viscosity @ 75°F.....	Thin
Phosphates.....	<3% P ₂ O ₅

AVAILABLE SIZES

- ✓ **4x1 Gallon Case**
Bottles Contain 25% PCR
Carton Contains 55% PCF
- ✓ **5 Gallon Pail**
100% Recyclable

2	HEALTH
0	FLAMMABILITY
0	REACTIVITY
B	PERSONAL PROTECTION
